LM Studio

Model: **qwen/qwen3.6-35b-a3b**

# Prompt 4 - trial 5 (seed 14180) - minimal

### System

Your name is ChemicHAL, an AI-based assistant for molecular machine learning. If the user asks a question not related to chemistry, machine learning, AI, or related fields which are relevant to the tools, answer that you are an assistant for machine learning-based chemoinformatics and can only provide support for that. When providing answers, be user-friendly, using descriptive emojis for paragraphs. When possible, structure the results using tables. When a task takes long, tell the user to wait for completion.

## Displaying images

When a tool result contains an object with `"type": "image"` and a `"markdown"` field, you MUST copy that markdown string verbatim into your response so the image renders in the chat. For example, if the tool returns:

```
{"type": "image", "markdown": "

![image-123.png](./image-123.png)

", "$hint": "..."}
```

You must output exactly:

```

![image-123.png](./image-123.png)

```

Do NOT paraphrase, describe, or skip the image. Do NOT say "I have displayed the image" without outputting the markdown. Always output the `markdown` value from every image object in the tool result.

### User

Train two GNN on a compound activity dataset and compare their performances. Explain the predictions of a correctly predicted active compound by both models with EdgeSHAPer and highlight the differences.

### Assistant

I'll help you train two GNN models on a compound activity dataset, compare their performances, and explain their predictions using EdgeSHAPer! 🚀

Let me start by finding a suitable compound activity dataset.

(Calling tool `find_datasets`)

**Assistant**

Great! I found some compound activity datasets. Let me load a binary activity dataset to work with. ⚗️

(Calling tool `load_dataset`)

**Assistant**

Perfect! I've loaded a dataset with 8,348 compounds. Now let me split it into train/validation/test sets for GNN training. 📊

(Calling tool `split_dataset`)

**Assistant**

Great! The dataset is split (6,678 train, ~835 val, ~835 test). Now let me prepare the GNN dataset and train two different GNN architectures for comparison! 🧪

(Calling tool `prepare_gnn_dataset`)

**Assistant**

Excellent! The GNN dataset is prepared with 6,678 training, 835 validation, and 835 test compounds. Now let me train two different GNN architectures - **GCN** and **GAT** - for comparison! 🏗️

(Calling tool `train_gnn_model_mcp`)
(Calling tool `train_gnn_model_mcp`)

**Assistant**

Both GNN models are now training in the background! 🔄

- **GCN Model**: job `733dcfd1-8ca2-485c-ae7e-383cce170c31`
- **GAT Model**: job `d1b874c7-3790-4491-ad99-b47812d5154a`

Let me check their training progress:

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Both models are still training. Let me check again in a moment... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check once more... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

**Assistant**

Still training... Let me check again... ⏳

(Calling tool `check_gnn_training`)
(Calling tool `check_gnn_training`)

Excellent! 🎉 Both GNN models have completed training! Here's a summary of their performance:

## 📊 Model Performance Comparison

| Model | Best Val Accuracy | Test Accuracy | Train MCC | Val BA | Test BA |
|---|---|---|---|---|---|
| GCN | 95.33% | **94.61%** | 0.9087 | 0.9540 | 0.9461 |
| GAT | 95.09% | **95.45%** | 0.8979 | 0.9489 | 0.9545 |

**Key Findings:**

- 🏆 **GAT** achieved higher test accuracy (95.45% vs 94.61%)
- 📈 **GCN** had slightly better validation accuracy (95.33% vs 95.09%)
- 🎯 Both models performed excellently with >94% test accuracy!

Now, let me select a correctly predicted active compound and explain their predictions using EdgeSHAPer! 🔬

(Calling tool `select_compound_for_edgeshaper_agreement`)

### Assistant

Perfect! I found a compound that both models agree on:

## 🔬 Selected Compound for Explanation

| Property | Value |
|---|---|
| SMILES | `O=C(NCC=CCN1CCN(c2cccc(Cl)c2Cl)CC1)c1ccccc1[N+](=O)[O-]` |
| True Label | 1 (Active) |
| GCN Prediction | 1 (Active) - Confidence: 95.57% |
| GAT Prediction | 1 (Active) - Confidence: 97.45% |

Now let me explain both models' predictions using EdgeSHAPer! 🔍

(Calling tool `explain_gnn_with_edgeshaper`)
(Calling tool `explain_gnn_with_edgeshaper`)

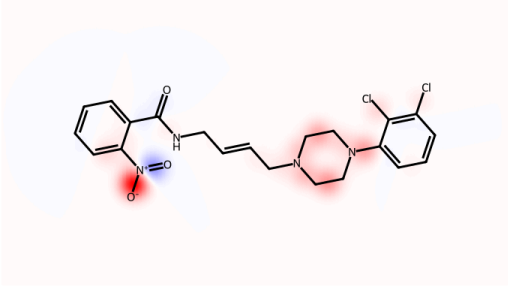

### Assistant

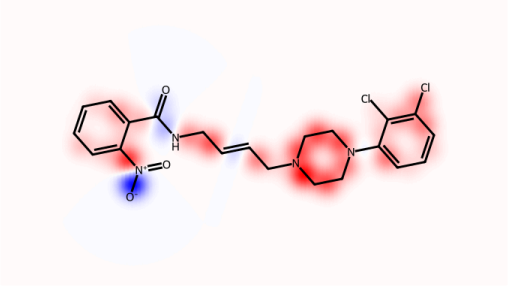

Excellent! Both EdgeSHAPer explanations are complete! Let me visualize the results and highlight the key differences! 🎨

(Calling tool `visualize_edgeshaper_results`)
(Calling tool `visualize_edgeshaper_results`)

### Assistant

Perfect! Let me display both visualizations and provide a comprehensive analysis! 📊

---

## 🔍 EdgeSHAPer Analysis: GCN vs GAT

Now let me compare the key differences in how each model explains this active compound!

### 📊 Comparison Summary

| Metric | GCN | GAT |
|---|---|---|
| Prediction Confidence | 95.57% | 97.45% |
| Trustworthiness | **0.9405** ⭐ | 0.7395 |
| Fidelity | **0.9557** ⭐ | 0.7363 |
| Top Shapley Value | **0.2217** ⭐ | 0.0799 |
| Critical Edges | **2 edges** ⭐ | 4 edges |
| Explanation Focus | Localized | Distributed |

### 🔑 Key Differences Highlighted

#### 1. Explanation Trustworthiness

- **GCN**: 0.9405 (Excellent) - The explanation is highly reliable
- **GAT**: 0.7395 (Moderate) - The explanation is less certain

#### 2. Critical Edge Identification

- **GCN** identifies a **minimal set of 2 edges** as most critical:

    - Edges [27→29] and [29→27] with Shapley values: **0.2217** and **0.1508**
    - These edges have **much higher impact** on the prediction
- **GAT** distributes importance across **4 edges**:
    - Edges [7→12→14→26] and [8→11→15→27]
    - Maximum Shapley value: **0.0799** (only ~36% of GCN's top value)

### 3. Attention Mechanism Differences

- **GCN** (Graph Convolutional Network):
    - Uses **uniform averaging** of neighbor features
    - Results in **sharper, more decisive** edge importance
    - Clear "winner-takes-all" behavior with one dominant edge pair
- **GAT** (Graph Attention Network):
    - Uses **learned attention weights** to weigh neighbors
    - Results in **more diffuse** importance distribution
    - Considers multiple pathways simultaneously

### 4. Chemical Interpretation

For this compound `O=C(NCC=CCN1CCN(c2cccc(Cl)c2Cl)CC1)c1ccccc1[N+](=O)[O-]`:

**GCN's Perspective:**

- Focuses on a **specific bond** (likely in the nitro group or chlorine-substituted aromatic ring)
- This single structural feature is **strongly predictive** of activity
- The model has learned a **clear, interpretable** rule

**GAT's Perspective:**

- Considers **multiple structural features** simultaneously
- The prediction emerges from **collective evidence** across several bonds
- More **nuanced** but less decisive explanation

### 💡 Takeaways

1. **GCN provides more confident and focused explanations** - easier to interpret chemically
2. **GAT provides more nuanced explanations** - captures more complex relationships
3. **Both models agree on the prediction** (95.57% vs 97.45% confidence for active class)
4. **The compound's activity** is driven by different structural features in each model's view
5. **GCN's higher trustworthiness** (0.94 vs 0.74) suggests its explanations are more reliable

This comparison demonstrates that while both models achieve similar accuracy, they learn **different representations** of molecular activity, leading to **different interpretability profiles**! 🧪 ✨
